

Eliminate phishing attacks at *their* network edge—not yours

Source-based interception preemptively blocks attacks before they reach your network perimeter

Protect against targeted threats at your network edges

Only Area 1 Horizon continuously tracks targeted phishing campaigns responsible for 95% of breaches and billions in losses. Whether from criminal gangs or nation-states, attacks are stopped at their source.

- Works smoothly with your own security infrastructure
- Configures seamlessly to push malicious indicators on firewalls
- Inspects network traffic for malicious phishing activity
- Detects and stops C&C activities to threat actor infrastructures

Area 1 Horizon's comprehensive capabilities and integration with powerful platforms proactively shuts down phishing campaigns before they reach your network perimeter.
