

Latest WannaCry Ransomware attack is running rampant

This weekend, [it was discovered](#) that the WannaCry, WCry or Wanna Decryptor attack was launched wreaking devastation worldwide.

According to the FBI report, WannaCry Ransomware can run in as many as 27 languages and is affecting various organizations in as many as 99 countries, including the United States, United Kingdom, Spain, Russia, Taiwan, France, and Japan.

Over 95% of ransomware attacks are caused by phishing. Phishing education, anti-spam and legacy perimeter defenses do not stop missed phish and it only takes one click to breach.

The only way to truly defeat a ransomware attack is to stop it before it breaches you.

Area 1 is the only preemptive cybersecurity solution to stop the source of ransomware-phish. Because Area 1 Security focuses on the attacker's infrastructure, identifying and analyzing attackers, and preempting attacks out beyond the edge of your network, before they can breach and cause damage to your company.

For a limited time, we're offering a complimentary **Missed Phish Report**. Submit your missed phish for a full analysis and learn how you can stop phishing attacks outside of your network to stop ransomware from getting in.
