

Malicious phish can't breach a network they never reach

Disable phishing attacks coming through your network traffic and preempt threats at the attacker's edge.

Block and disrupt phishing attacks before they reach you!

Area 1 Horizon™ disables the attack's delivery mechanism at the attacker's own edge, not yours. Detect, disrupt, and deny phish while protecting your network with the highest level of preemptive defense.

- Works smoothly with your own security infrastructure
- Focuses out beyond the firewall to detect developing attacks
- Inspects network traffic for malicious phishing activity
- Detects and stops C&C activities to threat actor infrastructures

Area 1 Security gives you unprecedented visibility into the attacker's infrastructure.

Result: no breach, no lost data, phish are disabled far from your perimeter in days or even weeks.
