

# Rush hour power.

***You control the fast lane with N.E.T.'s SwiftCell™ advanced traffic management.***

Now you can engineer your network for 100% utilization—and still deliver your QoS contracts. No more time-wasting contention. No more high-value voice, video, and data traffic stalled in a queue. SwiftCell management can smoothe out the burstiest traffic streams and speed you past your competition in ATM deployment.

SwiftCell automatically enforces fairness, despite turbulence, peak periods, and changing traffic patterns. It's so efficient you'll hardly know it's at work—but you'll see the results in dramatically increased revenue potential and satisfied users. You can cruise with SwiftCell advanced traffic management on N.E.T.'s Promina™ 4000 ATM Switch, part of a growing, carrier-class family that includes ATM network multiplexers and multiservice access platforms. *Now, the road is open.*
